

O'Brien Engineering, Inc.

Hydraulics . Hydrology . Civil Engineering

E01.Y10

State law (30 TAC 299.61(b)) requires that all Owners of "Significant Hazard" or "High Hazard" dams must submit an Emergency Action Plan (EAP) to the executive director (TCEQ) for review within two years after the effective date (**by January 1, 2011**) of the rules unless an extension of the time frame is requested and approved by the executive director.

The EAP is a very beneficial document for Owners of dams, but requires downstream inundation mapping of the design flood. O'Brien Engineering, Inc. has assisted numerous clients (including municipal, federal, and private Owners) with dam safety evaluations, hydrologic and hydraulic analyses, inundation mapping, preparation of EAPs, and other services. We would be privileged to assist you with your needs. Please contact us at 972.233.2288, or by email at jobrien@obrieneng.com.

O'Brien Engineering, Inc. (OEI) is a consulting civil engineering firm in Dallas. We provide specialization in dam safety evaluations and permits, dam rehabilitations, floodplain engineering, hydraulics and hydrology, complex drainage analysis, master drainage studies, erosion control, and regulatory permitting.

Established nearly a quarter century ago in 1987, our commitment is to provide the highest possible quality of service in an honest, ethical, cost-effective, and timely manner. We are dedicated to serving our clients.
